What is Blogs AutoFiller?

Blogs AutoFiller is the latest version of our line of advertising solutions. With the new Code Sequence Identification (CSI) technology that we have developed, you will be able to post lots of information just in one click.

Designed for Windows 98, 98SE, Win ME, Win NT 4, Win 2000, and Win XP Home/Professional. You can be sure that you will have the most effective autofill solution that has ever been offered by Oksima.

Benefits

Using Blogs Autofiller you can:

- Fill hundreds of blogs in few minutes.
- Autofiller finds blog sites itself using your query string and a search engine of your choice.
- Store found blogs and fill them many times.
- Store list of your favourite blogs and then autofill them as many times as you wish.
- View reports of the posting - links to the found blog sites can be saved in a separate file.
- Write as much personal information as you wish. It will be stored and used during autofilling.

So, using this software you **can save your time** and **make your site known**.

System Requirements

Processor: P400

RAM: Operating system + 30 MB

Hard Disk: 2 MB free space (minimal configuration)

Operating Systems:

Windows 98

Windows 98se

Windows Me

Windows NT4 Workstation

Windows NT4 Server

Windows 2000 Pro

Windows 2000 Server

Windows 2003 Server

Windows XP Home

Windows XP Pro

Windows XP (Home/Professional)

Windows XP 64-Bit Edition

Other: Java Virtual Machine 1.4.2 or higher. (it can be downloaded from <http://java.com/> - free).

How to download

Blogs AutoFiller can be downloaded from the website <http://www.nezabudka.oksima.biz> after you bought it. Download link with login and password (for verification when downloading) will be provided by the Oksima team as soon as you make payment.

If you have bought our product, but still did not receive a link to download, please, contact us at support@oksima.biz

When you receive a mail with the link, click on the link to go to that website*. A log in window will open up. Input login/password and click "OK".

The download window will appear. Click on the "Save" button and select the folder "My Documents" (or any other folder you prefer). Click "Save" again and the download will start.

* You must be connected to the Internet to access this link

Install Blogs AutoFiller

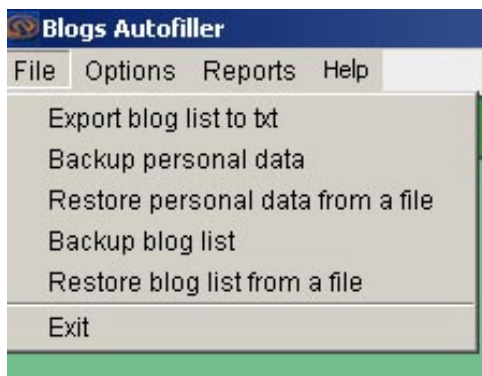

After download is completed, click on the downloaded file. You will be asked to accept our license. After license is accepted the program will be installed in to the 'Program Files' folder. The link to the program will appear in your 'Start → Programs' menu.

Blogs AutoFiller interface

Menu

File – options to backup/restore data.
Options – main options to work with the program.
Report – view reports of the program's work.
Help – view help topic, report to support.

File items

File → **Export blog list to txt** – saves the list of blogs (from the Data manager – Manage Blog list) to .txt file to the location you select.

File → **Backup personal data** – saves personal data (from the Data manager – Manage personal data) to the .txt file to the location you select.

File → **Restore personal data from a file** – restore personal data from .txt file you select.

File → **Backup blog list** – saves the list of blogs (from the Data manager – Manage Blog list) to .txt file to the location you select.

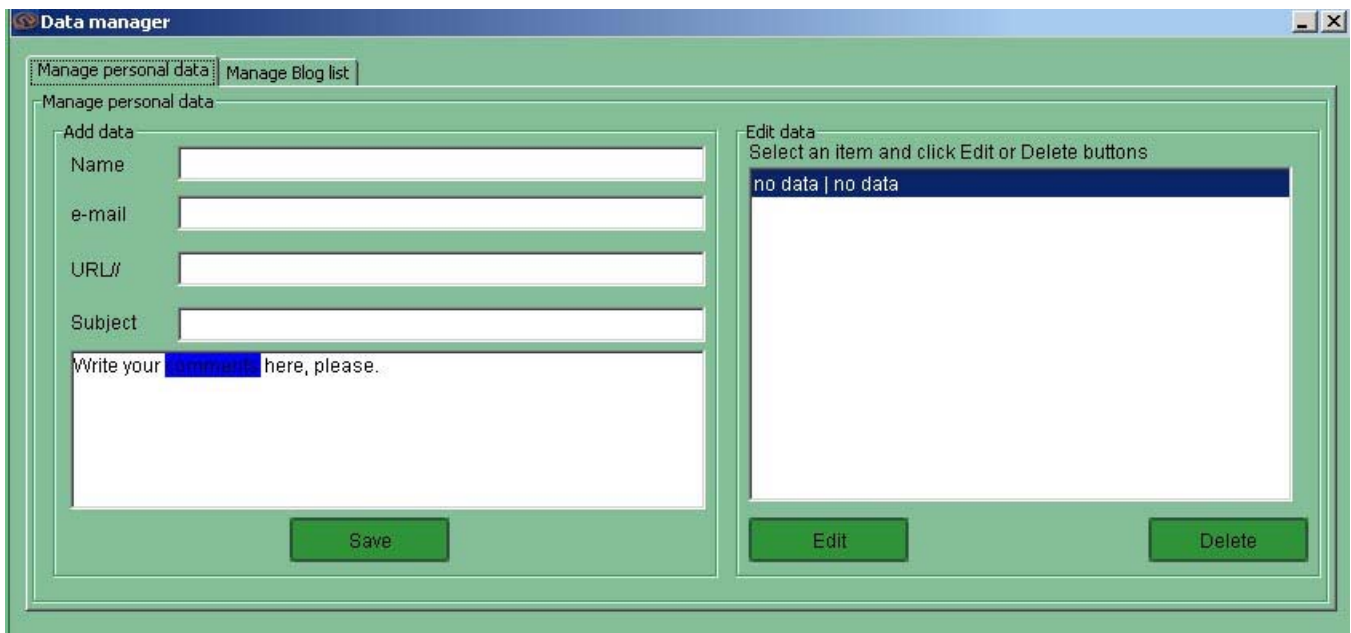

File → **Restore blog list from a file** – restore blog list from .txt file you select.

File → **Exit** – exit the program.

Options items

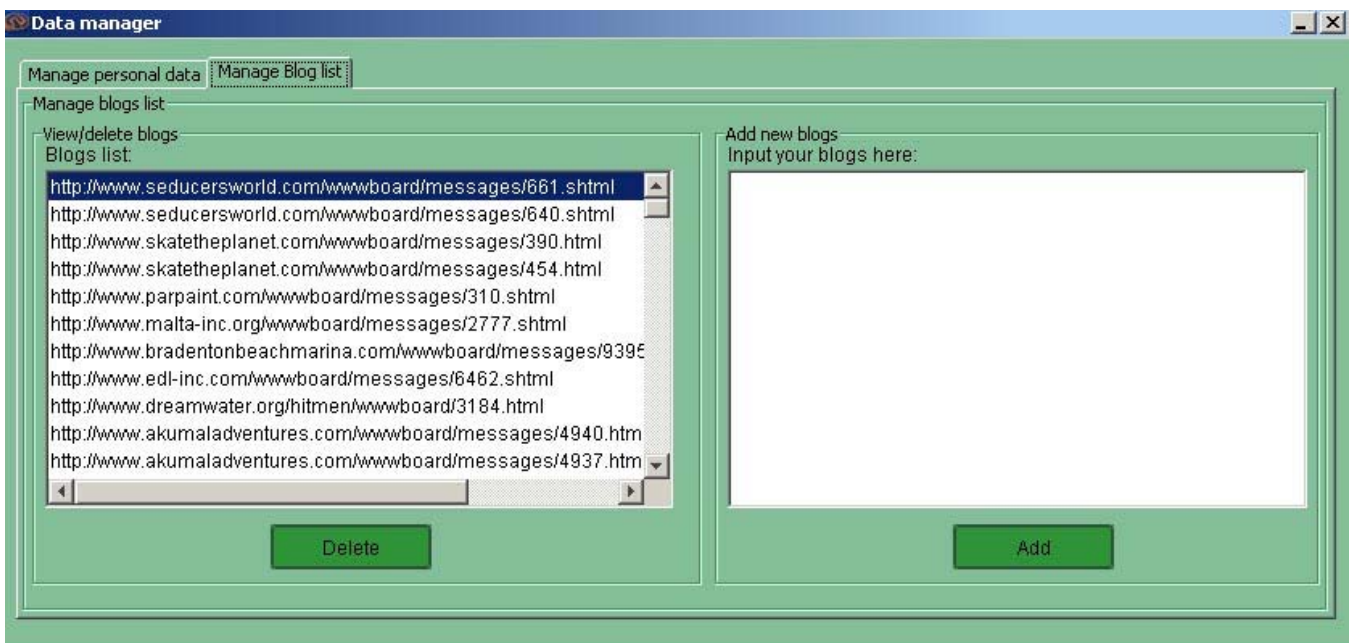

Options → **Data Manager** – Show Data Manager – to work with personal data and list of blogs.

Data Manager → Manage Personal data

1. **Add data** – add new data (set name, e-mail, URL and comments). This data will be used when running online search and filling blogs. So, this data will be selected randomly and filled in the blogs.
2. **Edit data** – edit/ delete your personal data.

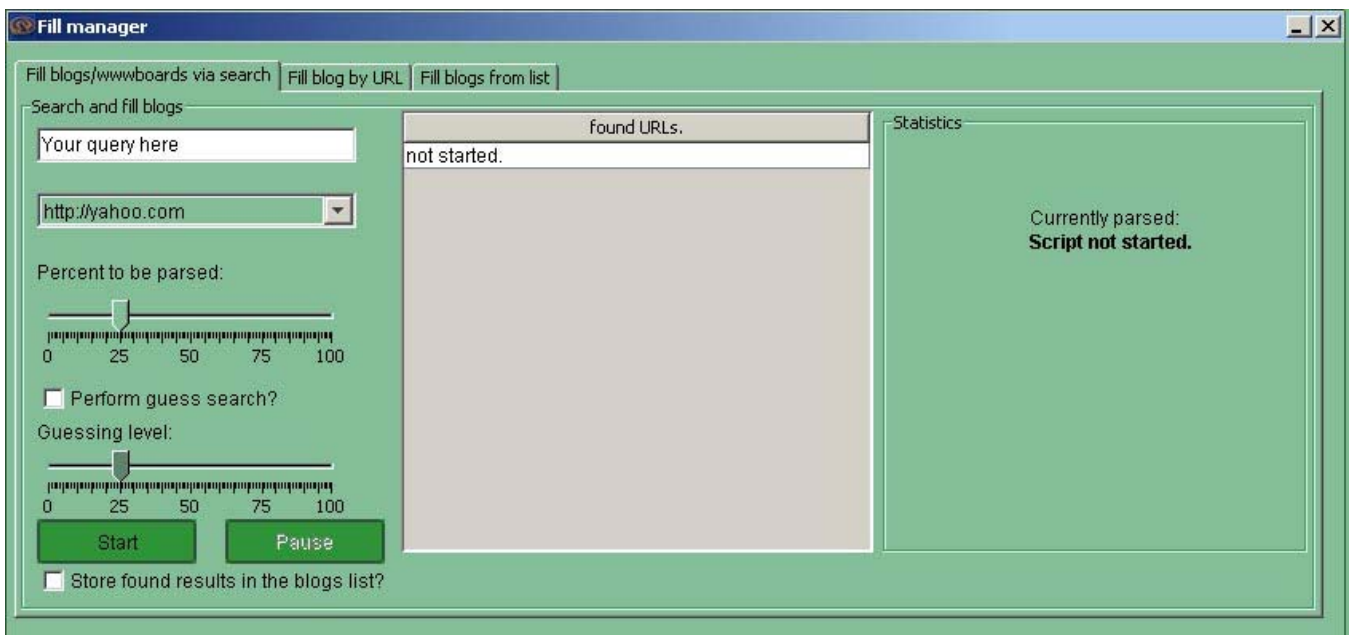

Data Manager → Manage Blog list

1. **View/delete bogs** – view / delete blogs from the list
2. **Add new blogs** – add URLs to blog sites to the list of blogs. (If you wish to add more than 1 URL at a time, press “Enter” between URL and than press “Add” button).

Options → **Fill Manager** – Show Fill Manager to start filling blogs with personal data.

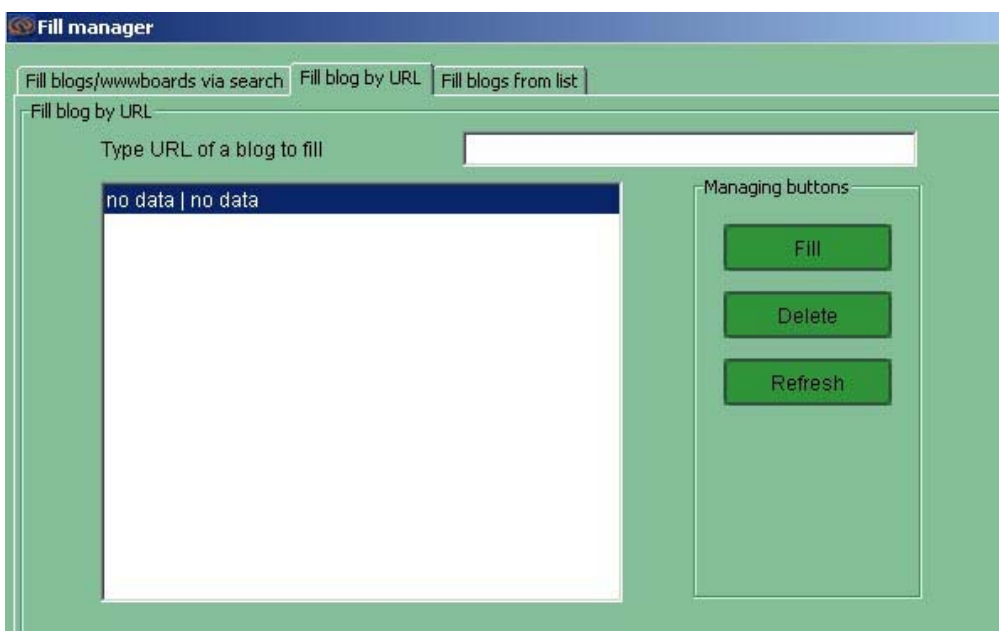

Note: Before perform any fill process, write personal data. It is used during fill process. If you write more than one item of personal data, it will be selected randomly during fill process.

Fill blogs/wwwboards via search

1. Input your query phrase
2. select search engine (where to search for blogs/wwwboards by the query phrase)
3. set percent to be parsed (percent of found sites)
4. check “Perform guess search” if you wish to perform it.
5. if you checked the item before, set the percent of blogs to perform guess search
6. check “Store found results in the blog list” if you wish to use found URLs more than 1 time.
7. Press “Start” button.

The statistics of the searching process will be shown in the Statistics window.
 Found and filled URLs – in the Found URLs window.

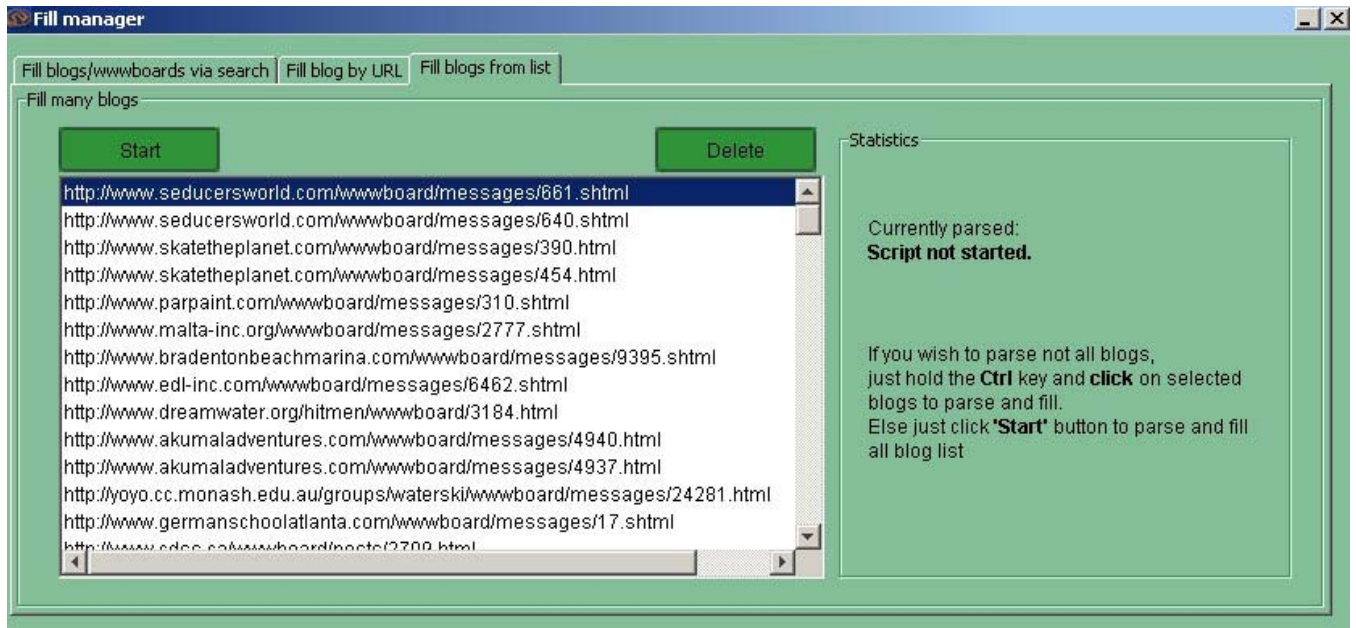

Fill blog by URL

1. select one item from personal data

2. write URL of the blog site
3. press fill button

Here you also can delete some personal data. If you do not see changes, push 'Refresh' button.

Fill blogs from list

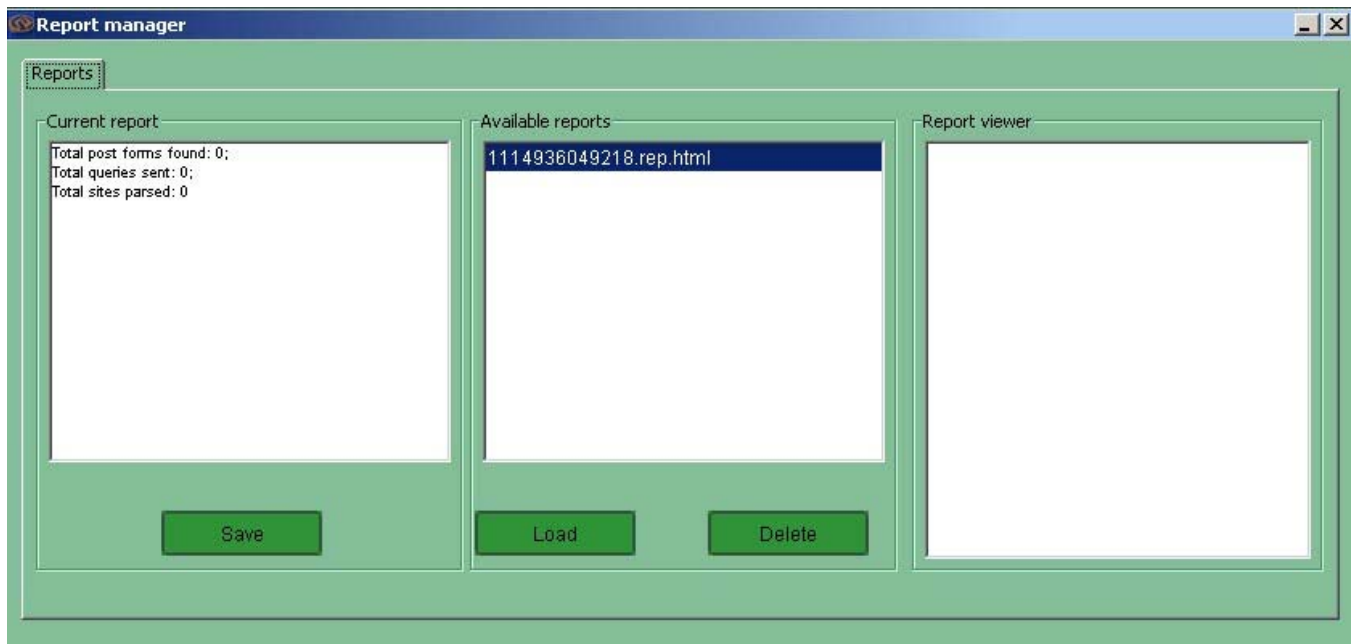

1. press start button to start filling all the blogs from list
2. if you wish to fill only a few blogs, hold Ctrl key and select those blogs by clicking on them. Then click start button

Here you can also delete blogs from list, select blog you wish to remove and click Delete button

Report items

Reports → Reports manager – view, save, delete filling reports.

Current report – view current filling report (Press “Save” button to save current report).

Available reports – list of saved reports

View report

1. select report among available reports
2. press “Load” button
3. Report will appear in the “Report viewer” window

Help items

Help → **Tutorial** – view tutorial

Help → **Report to support** – here you can write a message and send it to our support center.

Help → About – about this program.

Help → Licence agreement – view licence agreement.

Additional important information

Time of execution

Time of execution depends on the quantity of blogs you wish to autofill and on the size of the blog sites. So, do not worry if the program execution time is long.

Strongly recommended

If you plan to fill more than 1000 blogs, it is strongly recommended to MINIMIZE the program window. It is useful also when you fill less than 1000 blogs. In this case the program uses less memory.

Why some blogs are not filled?

Do not forget that Blogs Autofiller does not fill password protected blogs, or blogs protected by special scripts or software. Check also if blog is still open for new posts.

Frequently Asked Questions

If you have any questions about these products, please, write us your questions and we will post the answer on our site or write directly to you (if you wish). We are waiting for your letters at support@oksimabiz.

Why some blogs are not filled?

Do not forget that Blogs Autofiller does not fill password protected blogs, or blogs protected by special scripts or software. Check also if blog is still open for new posts.

How can I be sure that it really fills blogs?

You can save report after the program finished work. There will be links to all found blogs. So, check there for your information.

How many different personal data records can I set?

You can set as many personal data records as you wish. All of them will be used while filling blogs.

Why the program works so long?

Time of execution depends on the quantity of blogs you wish to autofill and on the size of the blog sites. So, do not worry if the program execution time is long. If you plan to fill more than 1000 blogs, it is strongly recommended to MINIMIZE the program window. It is useful also when you fill less than 1000 blogs. In this case the program uses less memory.

How can I find more blog sites?

There are some queries that return only blogs (or most of the returned URLs are blog sites). For example, try 'link:http://www.payday-loan-i.info' or 'link:http://www.epaycash.com' or 'casino message board post viagra'.

What is "Perform guess search"?

To answer this question we will show an example.

For instance, Blogs AutoFiller found a wwwboard which look likes this:

<http://www.fclobserver.com/wwwboard/messages/112.html>

This means that this wwwboard may have at least 112 blogs. So, 'perform guess search' option will operate blogs from 001.html till 112.html and will try to fill them. If you set percent of inline blogs to 25%, as by default, then blogs will be checked from 001 till 028.html (one quarter of 112). If 100% - all blogs from 001 till 112.html will be checked.

Note: It is the same as 'fill inline blogs' in the older versions of Blogs Auto Filler.
